IMAGE AND VISION COMPUTING

Index to Volume 2, Numbers 1—4, Pages 1—224 (1984)

Subject Index

(N) *denotes a news item*

Accumulator
  obtaining viewing distance and angle of gaze from vertical disparity using a Hough-type accumulator 180
Algorithm development
  environments for image processing algorithm development 198
Angle of gaze
  obtaining viewing distance and angle of gaze from vertical disparity using a Hough-type accumulator 180

Cameras (N) 218
  solid-state (N) 165
Circularity
  – a new principle underlying the design of accurate edge orientation operators 134
Classification
  object decomposition and subpart identification – classification algorithms 109
Clustering
  analysis of integer programming formulations of clustering problems 35
Connected components
  linear time algorithm for finding a picture's connected components 191
Constraints
  matching 'sticks, plates and blobs' objects using geometric and relational constraints 85
Content verification (N) 162
Contextual classification
  of multispectral pixel data 13
Cyber 205
  memory increase (N) 218

Decomposition
  object decomposition and subpart identification – classification algorithms 109
Difference pictures
  difference and accumulative difference pictures in dynamic scene analysis 99
Dimensional analysis
  with solid-state cameras (N) 165
Draughting and design (N) 163
Dynamic scene analysis
  difference and accumulative difference pictures in dynamic scene analysis 99

Edge features
  computation of optic flow from the motion of edge features in image sequences 59
Edge orientation
  circularity – a new principle underlying the design of accurate edge orientation operators 134
Education
  low-cost remote sensing experiments within an educational environment 3

Fibre optics (N) 216
Fingerprint matching (N) 167
Flat-panel displays (N) 170

Geometry definition software in 3D (N) 46
Grain constitution
  image processing and analysis of the grain constitution in minerals 204
Graphics cards for STD (N) 165
Graphics controller board (N) 51
Grey-tone
  model-based segmentation of grey-tone images 123

Hough
  obtaining viewing distance and angle of gaze from vertical disparity using a Hough-type accumulator 180

Identification
  object decomposition and subpart identification – classification algorithms 109
Image analysis (N) 219
  on personal computers (N) 44
Image recognition (N) 217
Image sequences
  computation of optic flow from the motion of edge features in image sequences 59
Industry
  image processing system for industrial robots 31
Intelligent colour graphics (N) 216

Laser-produced photographs (N) 162
Lasers
  for printing (N) 54
  for tracing PCB designs (N) 49
  to study combustion gases (N) 171

Machine vision (N) 107
  consultancy (N) 108
  research unit (N) 54
  V S Remek (N) 223
Market reports
  computer graphics for CAD/CAE in Italy 53
  laser market opportunities 170
Model
  -based segmentation of grey-tone images 123
Modelling
  in engineering analysis (N) 47

Optic flow
  computation of optic flow from the motion of edge features in image sequences 59
Overlinking
  hidden line mechanism using overlinking 150

Postprocessing
  in digital image processing system (N) 217
Postprocessors
  for interactive graphics (N) 172

Recognition
  handwritten numeral recognition by tree classification methods 143
Remote sensing
  low-cost remote sensing experiments within an educational environment 3
Robots
  image processing system for industrial robots 31
Robot vision
  $60M deal (N) 167

Segmentation
model-based segmentation of grey-tone images 123
Tomography
computerized tomographic imaging is insensitive to density variation during scanning 76
Tree classification
handwritten numeral recognition by tree classification methods 143
Vertical disparity
obtaining viewing distance and angle of gaze from vertical disparity using a Hough-type accumulator 180
Viewing distance
obtaining viewing distance and angle of gaze from vertical disparity using a Hough-type accumulator 180
V S Remek (N) 223

Title Index

A hidden line mechanism using overinking 150
Analysis of integer programming formulations of clustering problems 35
Circularity – a new principle underlying the design of accurate edge orientation operators 134
Computation of optic flow from the motion of edge features in image sequences 59
Computerized tomographic imaging is insensitive to density variation during scanning 76
Contextual classification of multispectral pixel data 13
Difference and accumulative difference pictures in dynamic scene analysis 99
Environments for image processing algorithm development 198
Handwritten numeral recognition by tree classification methods 143
Image processing and analysis of the grain constitution in minerals 204
Image processing system for industrial robots 31
Linear time algorithm for finding a picture's connected components 191
Low-cost remote sensing experiments within an educational environment 3
Matching 'sticks, plates and blobs' objects using geometric and relational constraints 85
Model-based segmentation of grey-tone images 123
Object decomposition and subpart identification – classification algorithms 109
Obtaining viewing distance and angle of gaze from vertical disparity using a Hough-type accumulator 180
